

Grant Fonseca

Software Engineer

Rohnert Park, CA | grantnfonseca@outlook.com | (707) 326-4959 | grantfonseca.com

Profile

Full-stack Software Engineer with over 6 years of experience building scalable web applications, RESTful APIs, and data-driven dashboards. Proven track record of owning application-layer features end-to-end — from data modeling and API design to React and React Native UIs. Experienced shipping high-impact features in collaborative, cross-functional environments with a strong emphasis on production reliability, robust error handling, and maintainable code.

Technical Skills

Languages: TypeScript, JavaScript, Python, C#, Java, SQL, HTML/CSS, **Frontend:** React.js, React Native, Node.js, Express.js Backend & APIs: REST API design, MySQL, MongoDB, Spring, SQL triggers & stored procedures Infrastructure: AWS, CI/CD pipelines, GitHub, IIS, Linux Tools & **Platforms:** AI (Copilot, ChatGPT, Deepseek, Claude, Ollama local LLMs), FME (Feature Manipulation Engine), Splunk, Neovim/Vim, IntelliJ IDEA, PyCharm, Visual Studio, Android Studio **Methodologies:** Agile, DevSecOps, Docker, Redis, Apache Kafka, unit & integration testing, change control, end-to-end ownership, GPU-Accelerated Computing, Inference Optimization, Model Fine-Tuning, AI Orchestration, Agentic Workflows, Generative AI, LLM Integration, AI-Powered automation, Prompt Engineering, Natural Language Processing (NLP), Knowledge Graphs.

Experience

Department Programmer Analyst · City of Santa Rosa
Oct 2023 – Present

- Architected and deployed a Cityworks–CIS system integration using FME and Python, enabling automated bidirectional data exchange between two enterprise asset management platforms via extensive REST API calls and higher-order functions for reusable, composable pipeline logic
- Built a custom Python error-handling wrapper used throughout the integration that automatically emails the technical support team with structured alerts — including the precise location in the pipeline where the failure occurred, the specific record and data involved, and a categorized description of the error — dramatically reducing mean time to resolution for integration incidents
- Enforced software engineering best practices across the integration project: GitHub source control with feature branching, a formal change control process for production deployments, and comprehensive error logging
- Mentoring a junior developer on the Cityworks–CIS integration, guiding them through system architecture, API design patterns, Python best practices, and the operational context of enterprise data pipelines
- Engineered a full-stack C# web application with a REST API layer and custom access controls, enabling bulk inserts into a production ArcGIS/SDE geodatabase — eliminating hours of manual data entry for city staff
- Designed Python automation scripts to migrate thousands of critical records into a live production environment with zero data loss and minimal service disruption
- Built SQL triggers and stored procedures to enforce automated business rules, ensuring data consistency and reducing manual intervention across departments
- Deployed and maintained CI/CD pipelines to support rapid development cycles while preserving production stability

Full-Stack Developer · Office Work Software (OrgChart Now)
Nov 2021 – May 2023

- Built and enhanced React and React Native components — including composite UI elements such as avatar, card, and navigation components — for a SaaS product serving customers that generated \$10M+ in annual revenue

- Developed a JavaScript user-action tracking system to monitor feature usage across the application, surfacing behavioral data that directly informed product and UI decisions
- Created Splunk dashboards and data visualizations to communicate application usage patterns and KPIs to stakeholders, enabling data-driven prioritization
- Identified and resolved critical production defects impacting top-paying customers, owning the full fix lifecycle from root-cause analysis through regression test coverage
- Wrote unit and integration tests across a large codebase to improve reliability and reduce regression risk across future development cycles

Full-Stack Developer · Cross-Check, Inc.
May 2021 – Nov 2021

- Engineered a cross-platform web application using HTML/CSS, Java, and REST APIs, implementing CRUD operations and search functionality for employee workflow management
- Led migration from a legacy platform to a new system via API integrations, modernizing the UX with JavaScript animations and improved component structure

Co-Founder / Software Engineer · MaxCrim
Nov 2020 – May 2021

- Scoped, architected, and shipped a full MVP end-to-end — a centralized web platform aggregating background check data across multiple state and county sources
- Gathered technical requirements from stakeholders and delivered a working solution meeting all product requirements on schedule

Projects

Software Engineering Portfolio TypeScript · React · grantfonseca.com

- Designed and built a personal portfolio site using TypeScript and React, demonstrating front-end architecture, component design, and type-safe development practices

Education

B.S. in Computer Science Sonoma State University
LinkedIn Learning: React, Agile Development
