Engineering Manager at orgchart

I am writing to provide a comprehensive performance review of Grant Fonseca, who has been working under my direct supervision as an engineer. Grant has consistently demonstrated a high level of technical expertise and commitment to his responsibilities, making notable contributions to our organization's projects and customer support.

Grant has excelled in handling bug tickets, system issues, and debugging tasks. His exceptional problem-solving skills and attention to detail have played a crucial role in identifying and resolving complex issues within our products. He consistently exhibited a proactive approach in investigating and addressing customer-reported problems, ensuring efficient and effective resolution. Grant's ability to diagnose and rectify technical challenges has significantly contributed to the overall improvement of our product's stability and performance.

I would particularly like to highlight Grant's significant contribution to the development of the new React-based version 2 of our orgchart product. His dedication and expertise were instrumental in implementing key features, optimizing performance, and ensuring a seamless user experience. Grant consistently met project deadlines and produced high-quality code that adhered to industry best practices. His collaboration with the development team and effective communication skills significantly contributed to the successful completion of the project.

Grant's commitment to providing exceptional customer service deserves recognition. He consistently handled customer issues with professionalism, empathy, and a strong problem-solving mindset. His ability to understand customer concerns and provide accurate and timely resolutions has greatly contributed to our organization's reputation for excellent customer support.

Furthermore, Grant has demonstrated excellent teamwork and collaboration skills throughout his tenure. He actively participated in team meetings, shared his knowledge, and readily offered assistance to colleagues whenever needed. Grant's positive attitude and willingness to go above and beyond his regular responsibilities have had a positive impact on team morale and productivity.

In addition to his technical competence, Grant exhibits strong interpersonal skills and displays a high level of professionalism in his interactions with colleagues, superiors, and customers. His ability to effectively communicate complex technical concepts to non-technical stakeholders has been invaluable in fostering effective cross-functional collaboration.

In summary, Grant Fonseca has consistently proven himself to be a highly capable and dedicated engineer. His technical expertise, problem-solving abilities, and commitment to delivering exceptional customer service have been instrumental in enhancing our products and maintaining high levels of customer satisfaction. Grant's positive attitude, teamwork, and strong interpersonal skills make him a valuable asset to our organization.

I strongly recommend Grant Fonseca for any future opportunities or roles within the company that align with his skills and interests. Should you require any additional information or further feedback, please do not hesitate to contact me.

To Whom It May Concern:

As the lead of 23andMe's cyber security team I am proud to endorse and recommend Grant Fonseca in all of his future endeavors.

Grant joined our team in the summer of 2019 as an intern to learn how we protect millions of customers' genetic data, health records, and other personal and sensitive information. Grant displayed a tenacity for learning the field and completing all of his projects before their deadline.

Grant displayed strong bash, python, and AWS skills. His final project combined all of these skills to deploy AWS Lambda functions in Python, scheduled through AWS Event Rule cron expressions to update searches in Sumo Logic, which would alert us through PagerDuty under certain circumstances. We have decided to keep the purpose of his work secret, but that's only because we've put it into production. We don't often have interns that can produce work as useful as Grant's. We don't often keep interns' projects around after they leave. We are thoroughly impressed with how quickly Grant was able to learn about AWS and use that knowledge to start building.

Grant's attitude and work ethic surpass even his technical abilities. Grant was always a pleasure to be around. He was amazingly resourceful in finding solutions whether by teaching himself or by networking with different people throughout the organization. Given a task, Grant would relentlessly chip away at it from different angles until he had a working solution. When provided feedback on any given solution, Grant was amazingly ego-less in modifying or replacing what he had built.

He was amazing to manage from every angle.

Please let me know if I can provide any more information.

Sincerely,

Patrick Kelley

Dear Sir/Madam,

I am pleased to write a letter of recommendation for Grant Fonseca. I first met Grant in Spring 2017 as his instructor for Intro to Programming at Sonoma State University. Grant stood out among his peers and showed interest in exploring topics outside class. In particular, he worked with me and two other students in an informal, independent study, organized around solving challenges from computer security competitions. In Fall 2019, I had Grant in my Intro to Security and Malware course, where he excelled. He is keen to understand systems by adopting adversarial thinking and a systems-level perspective. Some lab exercises were especially hard for students, and Grant demonstrated enthusiastic determination in the face of these challenges.

It was Grant's interest in computer security and his initiative that led to us to work together on a senior project in Spring 2020. Grant's senior research project involved performing forensic analysis of network traffic from the DEFCON cyber security competition. Our project goal was to build a library to help investigate evidence of exploit automation among competitors. The tools he used during his project included the scapy packet analysis python library and python thread pool executor library. Grant succeeded in developing a multithreaded pcap analysis tool comparable to ngrep, but with the potential to scale better: our data set is more than 500 GB of network data, to be searched for hundreds of regular expressions.

Working with Grant one-on-one was a joy. He is inquisitive, receptive to feedback, and a mature technical communicator. I looked forward to our meetings and felt confident in leaving Grant with problems that I did not know how to solve myself. Grant's performance is all the more impressive given the disruptions of a global pandemic in his final semester. Not only did he meet the challenge of working remotely in Spring, but he performed beyond my expectations. For example, Grant volunteered to summarize his project work at the SSU Science and Technology symposium, presenting a research poster at this year's (virtual) event. I was impressed in his willingness to take on this extra work. In contrast, I find students lose steam after "the work is done" and have little interest in communicating or reporting-out, but Grant understood it as both an opportunity and an important process.
